

# **Oil Burner Safety Control**

For 1- or 2-stage oil power burners up to 30kg/h capacity and intermittent operations.

# Flame detection:

- Photoresistor MZ 770 S
- Infrared-flicker detector IRD 1010
- UV solid state sensor UVD 970

## **APPLICATION RANGE**

The TF 830 or TF 832 oil burner safety control boxes are suitable to control and monitor oil power burner up to 30 kg/h capacity (approved and certified according to DIN 4787).

## **TYPES AVAILABLE**

TF 830 1-stage operation

post-ignition time ca. 20 sec.

TF 832 2-stage operation

post-ignition time 2-5 sec.

# **CONSTRUCTIONAL FEATURES**

The control box circuitry is protected by a flame resistant, transparent plastic housing. It incorporates the thermomechanical, temperature compensated timer, flame check and reset circuits.

Manual reset from lockout is provided by a push button with an integrated lockout signal lamp. A central fixing screw locks the control box to the wiring base. The wiring base and control box have a positive plug-in arrangement, making it impossible to achieve an incorrect connection between the two parts. A variety of cable entry points provides utmost flexibility of electrical wiring.

The TF 832 is fully compatible with the TF 730, 730-1.

An optional extension button (item no. 70601) compensates for height differences.

## **TECHNICAL DATA**

Operating voltage	220/240V(-15+10%)	
	50 Hz (40-60Hz)	
Fuse rating	10 A fast, 6 A slow	
Power consumption	ca. 5 VA	

Max. load per output

- terminal 3 1.5 A, cos φ 0.2 - terminal 4 4 A, cos φ 0.4 - terminal 5 0.5 A, cos φ 0.4 - terminal 6  $0.5 A, \cos \phi 0.4$ - terminal 7  $0.1 A, \cos \phi 0.4$ total load 5A, cos φ 0.4 Pre-purge time ca. 12 sec. Pre-ignition time ca. 12 sec. Post-ignition time TF 830 ca. 40 sec.

TF 832 ca. 2-5 sec

Delay time to oil valve 2 (TF 832) 40 sec.

Lockout safety time 10 sec.

Reset time from lockout ca. 90 sec

Special version with other timings on request

Flame detector:

MZ 770 S side-on and end-on

viewing > 6 Lux

IRD 1010 side-on or end-on

viewing

UVD 970 end-on viewing

Weight incl. wiring base 0.25 kg
Mounting position any
Protection class IP44

Recommended ambient operating

Light sensitivity MZ 770 S

temperature for control and

flame detector 0°C...+60°C

#### **APPLICATION NOTES**

#### 1. Flame control

The following detectors can be used for flame control:

- For yellow oil flame: photoresistor MZ 770 S
- for blue or yellow flame: infrared-flicker detector type IRD 1010 or as alternative the UV solid state sensor UVD 970.

Using the photo resistor MZ 770 S, the no flame signal is generated at light levels below 3 Lux with respect to the operating cycle of the control. According to DIN 4787 stray light safety level has to be established in conjunction with the accompanying burner.

Connecting the IRD 1010 or the UVD 970, the correct wiring has to be observed.

#### 2. Burner control

For burners without an oil solenoid valve, the burner motor has to be connected to terminal 5.

#### 3. Safety

The design and control sequence of the TF 830 and TF 832 control boxes comply with the currently applicable European standards and regulations.

# 4. Mounting and electrical wiring

Wiring base:

- 3 earth terminals with additional terminal for burner earthing
- 3 neutral terminals with internal permanent connection to neutral terminal (terminal 7)
- 2 spare auxiliary terminals
- 2 slide in plates and 2 easy-knockout holes (PG 11 thread), plus 2 easy-knockout holes in the bottom of the base facilitate the wiring.

# General:

 The control box can be mounted in any position. The protection class is IP44 (water spray tight). Neither the control box nor the flame detector should be subjected to excessive vibration.

#### **COMMISSIONING AND ROUTINE CHECKS**

#### 1. Important notes

- The controls must be installed by qualified personnel only. The relevant national regulations have to be observed.
- On commissioning the wiring has to be carefully checked according the appropriate diagram, Incorrect wiring can damage the unit and endanger the installation.
- The fuse rating has to ensure that the limits specified in TECHNICAL DATA will not be exceed. If these precautions are not observed, the effect of a short circuit can cause severe damage to the control and installation.
- For safety reasons a minimum of one control shut-down per 24 hours has to be observed.
- Disconnect the mains before the control box is plugged in or out!
- The control box is a safety device and must not be opened!

#### 2. Function control

For safety reasons the flame detection system should be tested on commissioning the installation as well as after a service or longer shut-down.

- a) Start-up with covered flame detector
  - After lock-out safety time is over the unit has to go in to lockout mode!
- b) Start-up with exposed flame detector:
  - After 20 sec. pre-purge time the unit has to go into lockout mode!
- Normal start-up with burner in the normal position, cover up the flame detector:
  - After start-up, and end of lock-out safety time the unit has to go into lockout mode!

# 3. Fault findings

Burner is not working:

- thermostat circuit open
- faulty electrical wiring

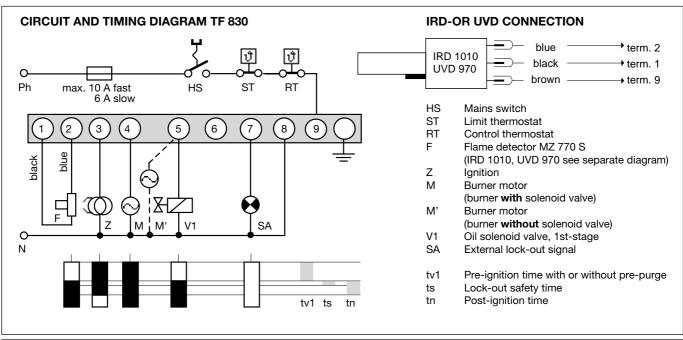

Burner starts, but the flame does not establish, a lock out occurs:

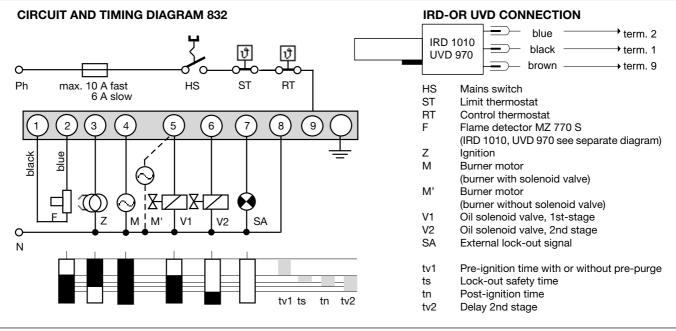

- stray light on flame detector
- no ignition or no fuel

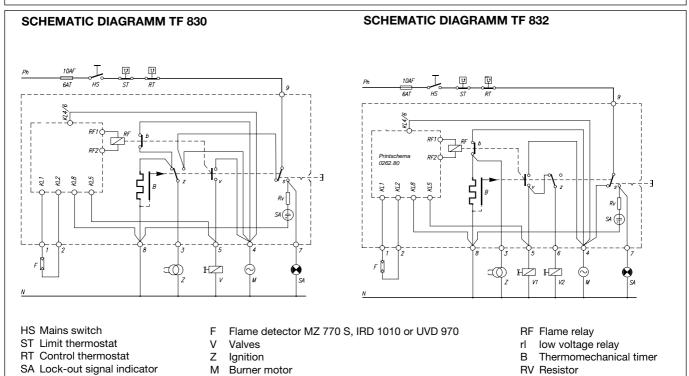

Burner starts, the flame establishes, but after the safety time, a lock out occurs:

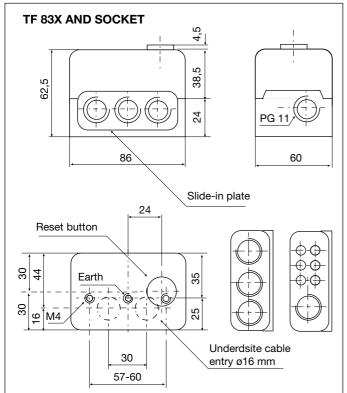

- dirty or faulty flame detector
- insufficient light on detector
- sensitivity adjustment too low on IRD.

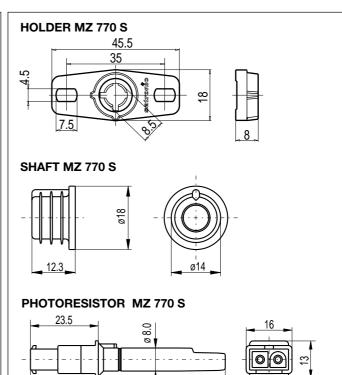

For a quick and safe diagnosis use the Satronic UP 940 burner test box.
